Color in the grayish with darker blotches on back. Eye -
Upper half red, annular red. Lower part golden. Pupil black.
Back of thighs marked with black on creamy yellow.
First joint of hind legs with yellow and black streaks extending
to the side just forward of the hind leg. Slight tinge of
yellow on back of forearm. ~~as~~

#375 Similar in coloration. Has a thin black streak from back of
eye passing over tympanum and connecting with a black
and yellow blotch on side back of face. Pupil of eye
bordered with a very narrow band of red.

Found in storeroom
(FUR) IN HOUSE

#356 Found in dark storeroom in ranchman's storehouse.
Sawed clinging on to wall while broad daylight outside 11 AM.
Storeroom light was dim, not actually dark but it had no
windows and a small door was the only entrance.

Eys. of #764

Rim
 Pupil Black
 Spotted area
 Black and white

This species was found under bark of pine posts,
 apparently associated with the "^{Ti}~~Tree~~ Tree" and
 posts were more pine this species of deer.
 It was not found by me in any other locality -

4 minute logs
Water Kolam River

930 ^{8 ft} Light green on back; belly whitish, very narrow black line.
belly green and white, upper arm black; front of thighs and underside of
hind leg orange; green patch on upper surface of forearm; a white
stroke on upper lip from under eye extending backward to a point
above the forearm; upper surface of thigh and hind legs greenish;
Feet grayish.

collected on light shaggy night in fernery of Station house. Sallow under
my sand and then only when running - sharp short cricket call. These specimens
taken on top of leaves. No doubt they live in the stag-horn ferns.

Dark line from nostril to eye
